EDUCATION

University of Texas at Austin — Austin, TX
Bachelor of Science in Computer Science — *Aug. 2025 – May 2028*

- Cumulative GPA: 3.96/4.0
- Relevant Coursework: Data Structures/Algorithms, Computer Architecture, Machine Learning, Operating Systems

EXPERIENCE

Software Engineering Intern — July 2026 – Present
CS Holding — *Part-time, Remote (Milan, Italy)*

- Built a Next.js dashboard with email classification triage that handles 200+ emails a day to centralize daily workflows and task scheduling, using GitHub Actions for CI/CD
- Developed a custom retrieval-augmented generation (RAG) pipeline using LangChain and pgvector database for company-wide hybrid search and queries over 3500+ private files with both semantic and lexical matching

Software Engineering Intern — May 2026 – June 2026
Days Inn and Suites by Wyndham — *Rochester Hills, MI*

- Trained an occupancy-forecasting model using XGBoost and recent booking data to make on-demand $5–$10 rate adjustments during peak-occupancy periods to increase monthly revenue by 3.8%
- Built REST API integrations with a channel manager to auto-ingest Expedia and Booking.com reservations via webhooks, automatically updating room availability and eliminating manual front-desk data entry

Technical Developer Lead — Jan. 2026 – Present
Texas Convergent — *Austin, TX*

- Co-led the design and development of an all-in-one member portal used by 200+ members to handle recruiting, attendance, and internal communication
- Built a fraud-resistant attendance system using a REST endpoint that generates a short-lived token every 5 seconds, with the display polling for the latest token to render as a QR code, improving true attendance by 23%

Software Engineering Intern — June 2025 – Aug. 2025
Lincoln Property Company — *Plano, TX*

- Built an NLP classifier to auto-triage maintenance requests by urgency and category, comparing a TF-IDF baseline against a fine-tuned transformer and achieving 87% precision on emergency-priority requests
- Automated weekly expense reporting/visualization for building management using Python, pandas, and matplotlib

PROJECTS

Pantriful | Java, Spring Boot, PostgreSQL, Flyway, Typescript, React Native, Docker — July. 2026 – Present

- Built a full-stack kitchen-inventory mobile app with OAuth2 authentication, self-issued JWT session management, and per-user data isolation, verified by 19+ integration tests and a full test suite
- Implemented barcode lookup, low-stock notifications, and receipt-scanning to reduce manual pantry updates
- Built a custom recipe recommendation engine matching a user's live pantry against cooking history, using schema-constrained LLM output to suggest healthy recipes for target users (college students)

Homegrown | TypeScript, React Native, PostgreSQL, TensorFlow — Sep. 2025 – May 2026

- Built a full-stack marketplace app for produce, plant posts, and community groups, growing to 30+ early users
- Built price-suggestion model for produce using polynomial regression, trained on 15,000+ historical listings and current market trends for maximized profit for sellers using the app
- Trained a MobileNetV2 classifier using transfer learning on 40,000+ images for produce freshness verification, reaching 94% test accuracy

MyDrive | Java, Spring Boot, React, Typescript, Docker, AWS — May 2025 – Aug. 2025

- Built a full-stack car rental platform with a Spring Boot/Java REST API, implementing JWT-based authentication, fleet/reservation management, and Stripe payment processing used by ~85 monthly renters across 45+ vehicles
- Implemented booking workflows requiring license and insurance verification and lease signing before payment, and designed reservation logic to prevent scheduling conflicts across the fleet

TECHNICAL SKILLS

Languages: Java, Python, C, C++, JavaScript, TypeScript, HTML, CSS
Frameworks & Tools: Git, Spring Boot, React, React Native, PostgreSQL, FastAPI, AWS, Docker
Libraries: pandas, NumPy, TensorFlow, PyTorch, Matplotlib, Streamlit, scikit-learn
AI/ML: LangChain, LangGraph, RAG, NLP
